Hydroponic BASIL

Vertical Flood and Drain System *BASIL TOWER*

8/31/15

9/5/15

9/13/15

10/9/15

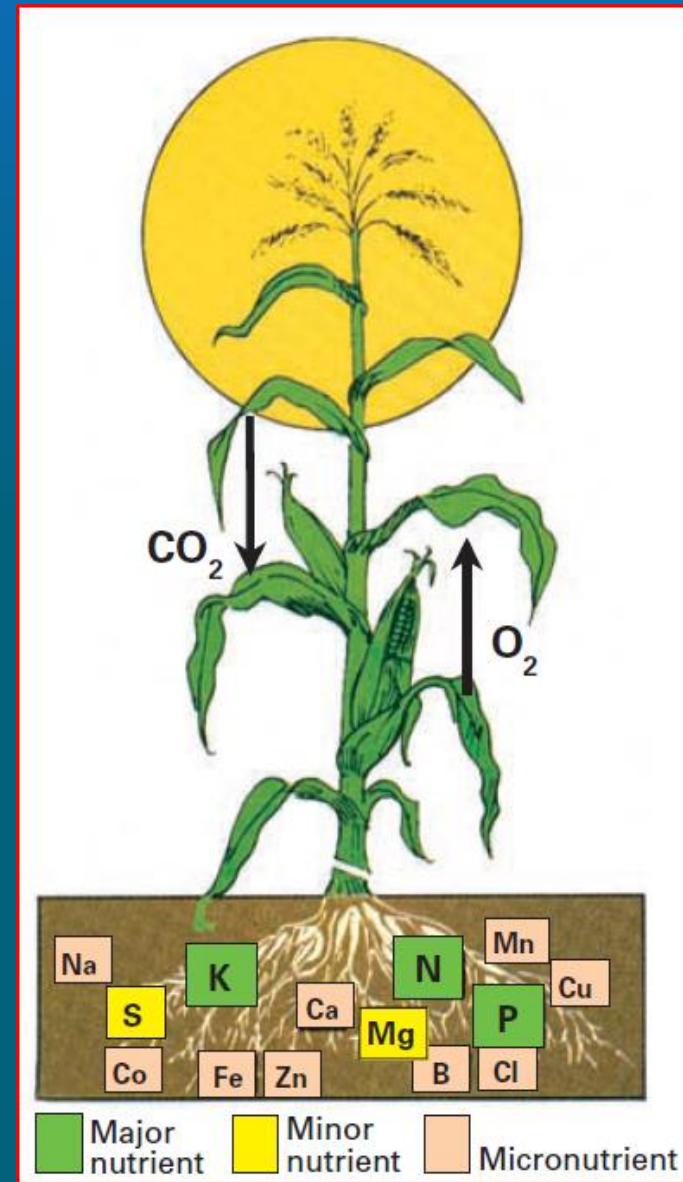

Basil Tower 1.0 (2015) in the dining room:

Components: System (types, substrates, lighting, heating)
Nutrients, CO₂, and
WATER...

Hydroponic BASIL

Simple plant physiology:

- $\text{CO}_2 + \text{H}_2\text{O} + \text{light} \rightarrow \text{C}_6\text{H}_{12}\text{O}_6 + \text{O}_2$
- N from N-fixation (*Ammonia-Nitrite-Nitrate*)
essential Amino Acids - Proteins
- P as phosphorus from soil (guano)
phospholipids, ATP, DNA, often
limiting
- K essential for growth, sugar movt,
resistance to stress (potash)
- **Minor nutrients & Micronutrients**
 - growth and metabolism
 - proteins, fats, chlorophyll, cell walls, enzymes, osmosis and ionic balance, N-fixation

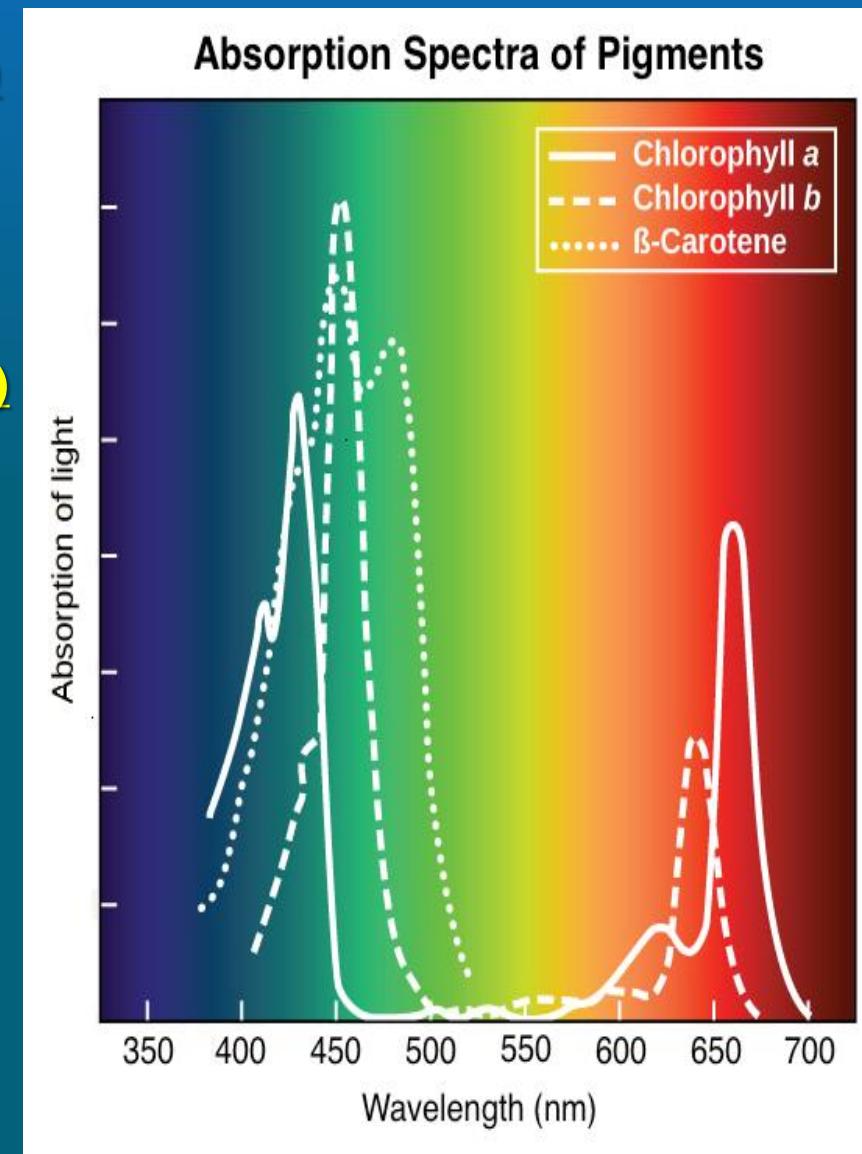

Photosynthesis (Chloroplast) pigments:

Chlorophyll a & b, Carotenoids
-absorb light of different energies

C-fixation (Chloroplast & Mitochondria)

- Photon Energy - splits CO₂ & H₂O
-“fixes” C into Carbs
- within Chloroplast
- C₆H₁₂O₆ of Photosynthesis used for energy / growth / metabolism
- within Mitochondria
- Hydroponics:
- Blue/Green Spectra - leafy growth, Red spectrum - flowering

Hydroponic BASIL

TYPES OF HYDROPONICS:

I. Sub-irrigation

- static solution, continuous-flow, passive sub-irrigation, **ebb and flow(flood and drain)**, deep water, rotary

II. Aeroponics, fogponics

II. Aquaponics (combined with fish, worms)

III. Top irrigation

- Run to waste
- Top-fed deep water

Rotary hydroponics

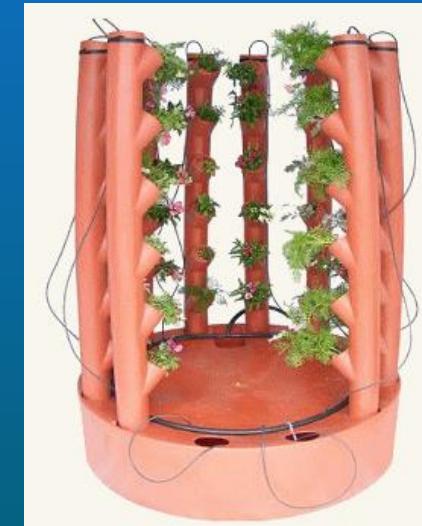

Hydroponic BASIL

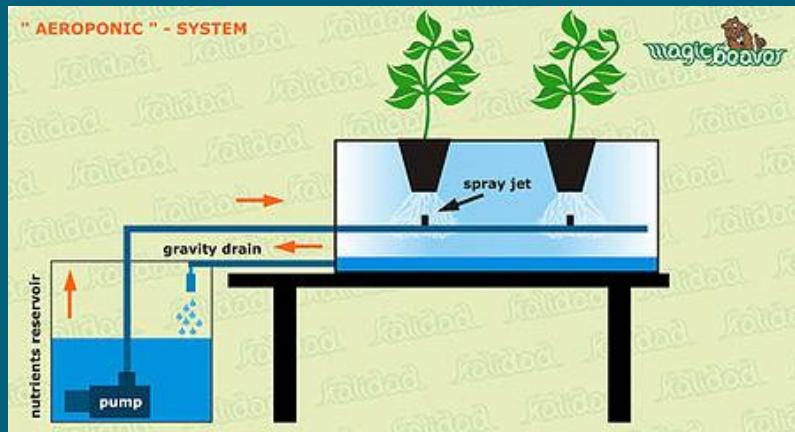

flood and drain

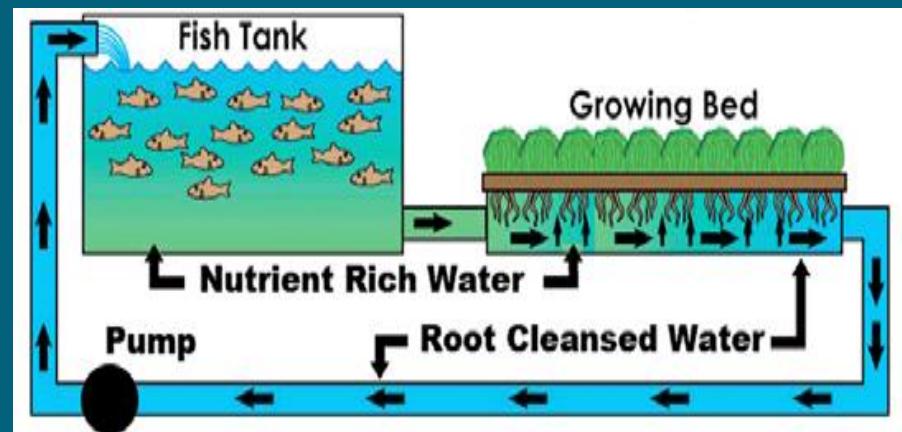

deep water

Hydroponic tower

aeroponics, fogponics

aquaponics

LIGHTING:

- **POOR** Incandescent – don't use these
- **GOOD** Fluorescents – T5 high output
 - Economical, more efficient than T8 or T12, best for leafy growth (Basil!)
- **BETTER** High Intensity Discharge (HID)
 - Energy hungry, expensive, use in combination with T5s or LED
- **BETTER** Light Emitting Diodes (LED) –
 - Expensive upfront, inexpensive to run, red, blue or full spectrum
- **BEST** The Sun! –
 - Attached greenhouse, with supplemental lighting & insulation for winter growth

SUBSTRATES:

- **Expanded clay pebbles**
- **Growstones (recycled glass)**
- **Coir (coconut husks)**
- **Composted organic material (peat)**
- **Rice husks**
- **Perlite (volcanic glass)**
- **Vermiculite (silicate)**
- **Pumice**
- **Sand**
- **Rock wool (mineral wool)**
- **Packing peanuts**

I. HYDROPONIC SOLUTIONS: Chemical Based... Urea, Ammonium Nitrate

- ***Essential Major nutrients*** (besides CO₂ and H₂O)
Nitrogen (**N**), Phosphorus (**P**), Potassium (**K**)
- ***Essential Minor nutrients and Micronutrients:***
Mg, S, Ca, SO₄, Cl, Fe, Cu, Mn, Zn, Mo, Bo, Na, Co
- No cation-exchange capacity, pH and nutrients change rapidly
- Selective absorption by plants, Nutrients can precipitate
- **Monitor pH closely**, buffer the solution
- CO₂ enrichment – fermentation , mushrooms, injection

Liebig's Law of the Minimum

- Growth = NOT total nutrients available, but ***limiting*** nutrients
- Justus von Liebig (1800s German)
“father of fertilizer industry”*

Hydroponic BASIL

II. HYDROPONIC SOLUTIONS: ‘Organic’ pre-mixed, can be more difficult to use

- *Examples of Sources for Major nutrients:*
bloodmeal, bird guano - **N** source
bonemeal, bat guano – **P** source
kelp meal / liquid seaweed, guano – **K** source
- *Examples of Sources for Micronutrients:*
wood ash, bone ash, bone meal - Ca, Mg, SO₄,
kelp meal/seaweed – various - Fe, Zn, Cu, Mn, Bo, Mo, Na
- Variable quality
- Particulate, can clog substrates and equipment
- Some organics can degrade to emit foul odors
- Unrefined pulverized minerals (Gypsum, Calcite, Glauconite) meet National Organic Standards

Hydroponic BASIL

Botanicare Nutrients derived from:

- Fish meal, Composted seabird guano, Kelp
- Rock Phosphate – $Ca_5(PO_4)_3F$ or $Ca_5(PO_4)_3OH$
(mined limestone or mudstone deposits)
- Potassium Carbonate – K_2CO_3
(mineral deposits or extracted wood ash, “potash”)
- Magnesium Carbonate – $Mg CO_3$
(dolomite or from seawater)
- Calcium Carbonate – $CaCO_3$
(coccolithophores, carbonate rock, “White Cliffs of Dover”)
- Humic Acid from Leonardite
oxidation product of lignite (“brown coal”) mining

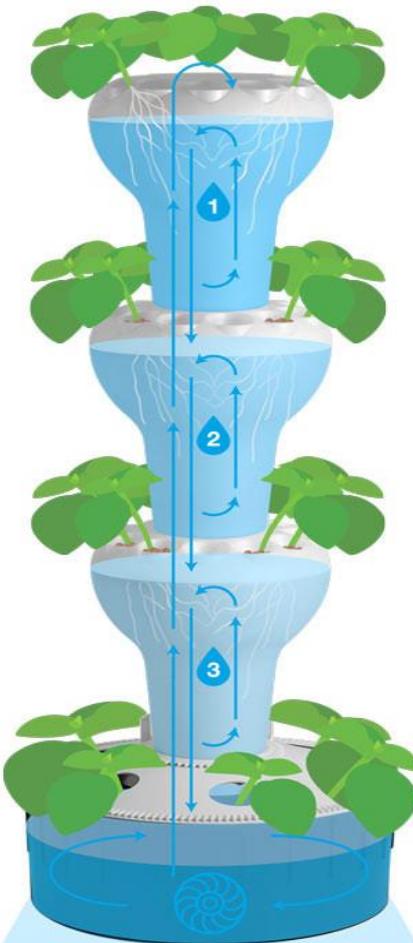

Sustainable?...

- Organic and mineral sources, ...NOT urea or ammonia nitrate
- Small nutrient quantities ...(< 1/2 pint/yr for 80+ plants),
- Inexpensive electricity ...from clean hydroelectric

Hydroponic BASIL

Vertical Flood and Drain System

(Diagram from www.foodyverticalgarden.com)

The diagram illustrates a vertical hydroponic system consisting of three stacked modules. Each module contains four plants with green leaves and white roots submerged in water. Blue arrows labeled 1, 2, and 3 indicate the flow of water from the bottom reservoir up through the modules. A circular arrow at the base shows a pump moving water back down into the reservoir.

Ideal for Indoors
Clean, efficient system is ideal for rapid plant growth

Lots of Space
12 growing pockets per module (44 per tower – lots of options)

Removable Plant Pockets
Net cups hold growing medium and come out cleanly and easily

Responsible Materials
Both models are:
• BPA Free • Food Grade
• UV-Resistant

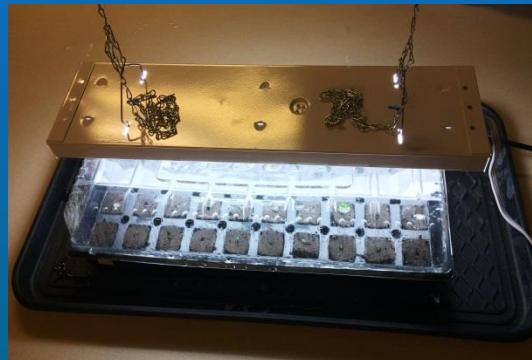

Optional Automatic Rotation
Motor-driven base rotates for optimum light exposure

Grow Room / Basil Tower 2.0 (2017):

- Basil Tower, auto rotation, aquarium heater
- insulated / enclosed grow space
- 20,000 lumen T5 fluorescents (4) and blue LEDs
- *Botanicare* Nutrients
- Expanded clay pebbles & Rapid Rooter
- pH meter, conductivity meter
- CO₂ generator (mushroom),
- temperature / humidity datalogger

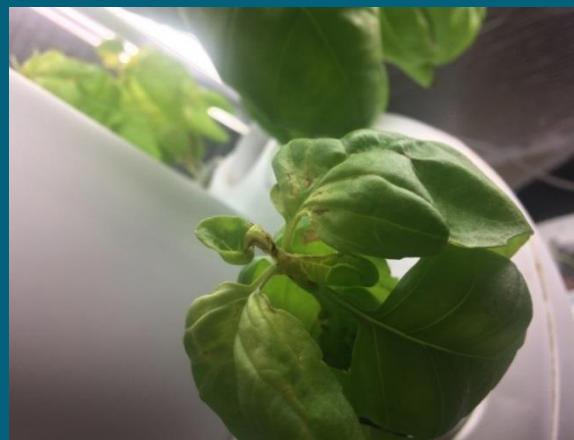

Hydroponic BASIL

- **Rapid Rooter peat starter plugs**
- Preferred TDS: 750-850 ppm, pH 5.1-6.0
- **Botanicare nutrients:** Grow: 3-2-4; Bloom: 2-3-5;
- **CO₂ generation via sugar/yeast or MyCO₂ mycelium generator (mushrooms!)**

Hydroponic BASIL

Some (FEW) problems I've encountered:

Algal overgrowth, bacterial 'soup', apical meristem fungus,
poor germination - old seed

Hydroponic ANYTHING ELSE!

Some other plants that can be grown:

VEGETABLES

- Arugula
- Beans
- Brocoli
- Cabbage
- Cauliflower
- Chard
- Cucumbers
- Eggplant
- Endive
- Kale
- Lettuce
- Okra
- Pak choy
- Peppers
- Spinach
- Strawberries
- Tomatoes

HERBS

- Basil
- Chamomile
- Chives
- Cilantro
- Celery
- Echinacea
- Fennel
- Garlic chives
- Lavender
- Lemon grass
- Lemon balm
- Marjoram
- Parsley
- Rosemary
- Sage
- Savory
- Thyme

EDIBLE FLOWERS

- Calendula
- Carthamus
- Dianthus
- Marigolds
- Nasturtiums
- Pansies
- Viola

ORNAMENTALS

- Coleus
- Cosmos
- Delphinium
- Eucalyptus
- Hibiscus
- Impatiens
- Petunia
- Zinnia
